**INFLUENZA
VIRUS**
— OR THE FLU —

is a common upper respiratory infection. It often starts with a headache, body aches, chills and a cough or sore throat. You may also develop a fever, loss of appetite, fatigue, runny nose, and sneezing. Nausea, vomiting and diarrhea may occur. With the potential risks posed by COVID -19 and RSV, limiting the spread of influenza remains very important again this year. Getting immunized against the flu is the most effective way to protect yourself, your family and community!
